

# WOOFIC

Woofic basically sells LED screens

The platform has two main groups: Supplier led products and service providers

Design Sample: <https://louise-ng.envytheme.com/admin-dashboard>

## Suppliers

- Suppliers will fill a form with services and products they offer
- User will fill a questionnaire and will wait for 48 hours to receive maximum number of quotes
- Suppliers will send a bidding offer, which the customer can see from their control panel.
- The client can receive as many proposals as there are suppliers.
- Suppliers have 48 hours to submit an offer, after that time they cannot submit an offer.
- A supplier can only send one proposal, they cannot send 2 offers, if they can modify the proposal sent at the client's request.
- Suppliers only know limited customer data: Name, Sector, Location
- During the 48 hours that the suppliers must make the offer, the suppliers can ask the customers questions to make the offer, but since the suppliers cannot contact the customers directly (to protect them), there must be an option to make these questions.
- There will be discussion forum where suppliers can ask question from user and this forum will be visible to all the suppliers.
- Once the 48 hours have passed, no more offers can be submitted for that project.
- The customer has 6 -7 quotes from different providers in his hand, he can compare them, and if he has any questions, he can open the chat to speak with the supplier
- When the client receives the offers from the providers in their panel, the results are displayed in order of contact, the first to contact appears first.
- There should be sorting of offers by
  - price: lower – higher
  - price: higher-lower
  - Distance
- Offers will be categorized in terms of
  - BEST PRICE: The one with the best price is automatically assigned
  - HIGHEST RATED: The one with the best rating is automatically assigned
  - RECOMMENDED: The provider that has closed the most operations in the last 30 days.
- Before sending any offer, the supplier will be shown what he will be charged for that offer using value charge and supplier packages.
- As soon as the supplier sends the offer, he/she will be charged, and that charge will be added in its account
- At the start of each month, an invoice will be generated for each supplier.
- Payment is made through the STRIPE payment gateway platform (<https://stripe.com/>)
- Once the project has been delivered and everything is correct, the client receives an email to give feedback for the supplier. After giving the feedback, the client receives a discount coupon for their next purchase.

- All new supplier registrations are manually reviewed by our team, they are asked for a series of documents proving who they are (so that there is no identity theft) and experience is checked. They are contacted via email / user panel.
- There can be no related companies
- There cannot be 2 companies with the same owner
- If in 30 days a project is not closed, the platform deletes the contact (to the supplier) and if the budget has been closed with another supplier, supplier will be notified and the supplier cannot contact the client.
- After 30 days, if it is the client who has delayed the operation so as not to close, the client can extend the period of 7 days by 7 days

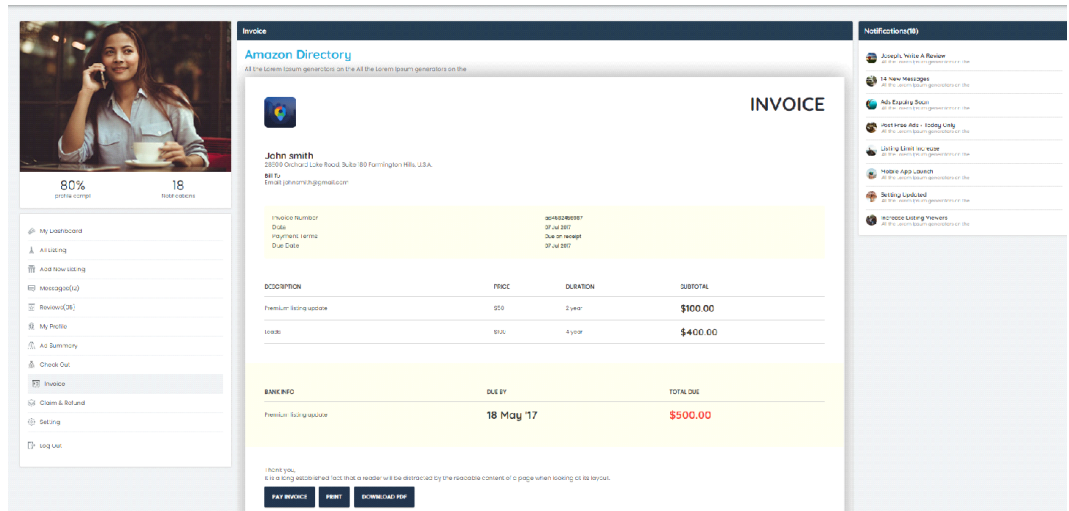

## Service Providers

- Complementary Services
- These services are offered by companies
- The woofic will look for a service provider, ideally close to your location,
- How the client contacts the service provider, goes to the web and in the corresponding section, he has access to all the providers, he can see their information, portfolio of jobs, reputation and he contacts through the chat to explain what he needs from the provider.
- The supplier makes an offer.
- The client makes the payment through the web safely.
- 

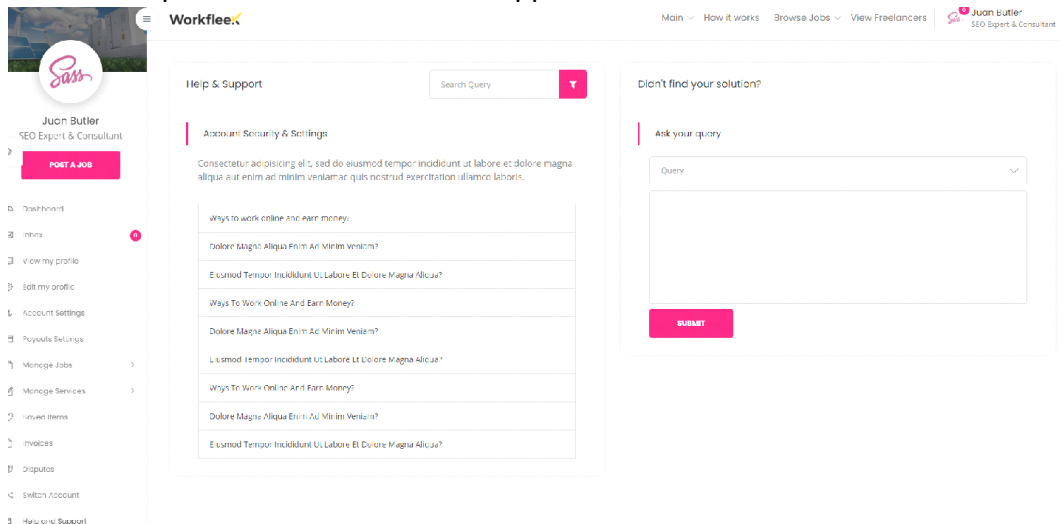

## Features

- Responsive
- Include Notification
- Social Media registration
- Should have 6 European Languages
  - Spanish
  - English
  - French
  - German
  - Italian
  - Portuguese
- Fast Loading (Google Page Speed Test)
- Smooth Transition Effects
- Integration with emails, direct chat, calls and video calls
- Include a project calendar
- Create and manage task in project
- Allow editing of supplier company profile
- Direct chat with machine translation (customer – provider)
- Integrate EKOMI <https://www.ekomi.es/es/>

- Allow to send documents to client
- Stripe payment gateway
- Ticket system, for incidents of products or services.

## Backend Flow

- User controller
    - CRUD for User
      - Input
        1. First Name
        2. Last Name
        3. Email
        4. Password
        5. Confirm Password
        6. Role (Administrator/Service Provider/Supplier/Client)
    - Implement Create, Update, Delete, Get
    - Input for Client
      1. Sector
      2. Location
      3. Contact Number
      4. Profile Image (Optional)
    - Input for Service Provider
      1. Location
      2. Service Description
      3. Rating
      4. Profile Image
      5. Contact Number
    - Input for Supplier
      1. Location
      2. Supplies
      3. Rating
      4. Profile Image
      5. Contact Number
- Forms Controller
